

USING GITHUB WITH NETBEANS

How to turn a project into a repository

Pre-Project checklist

These few things need to be done before you can start

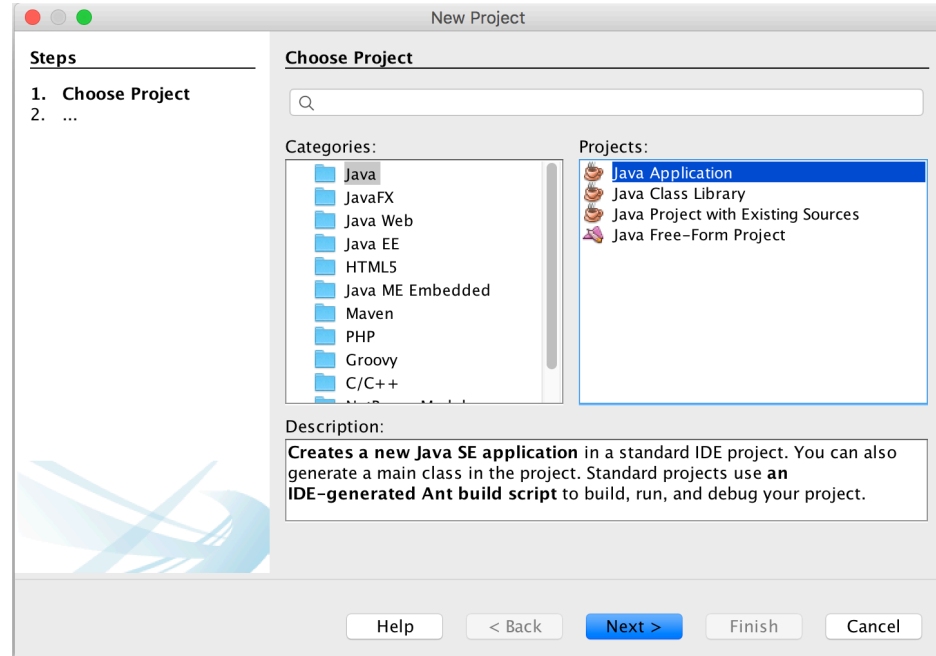

Make sure you have the newest version of netbeans (8.0.2) at this moment, and have a github account

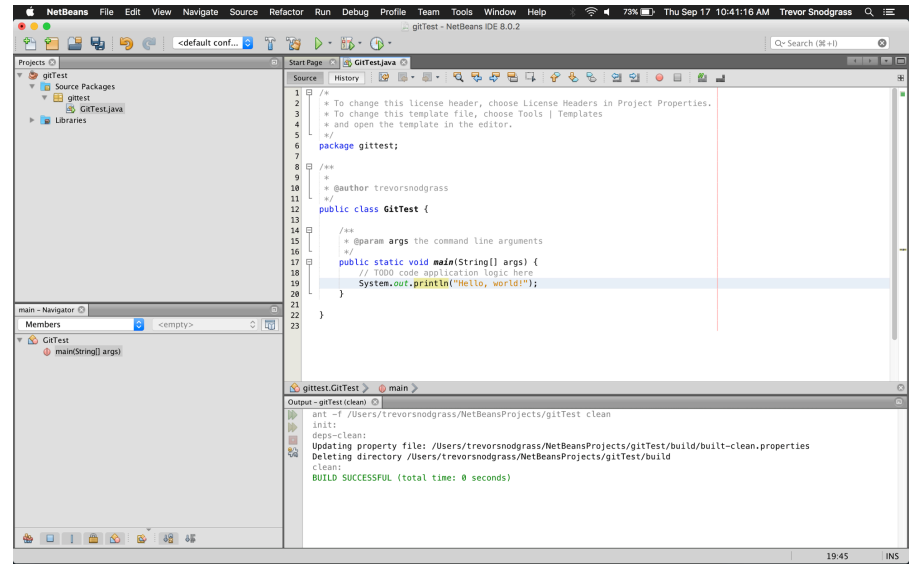

Turn your project into a repository

- ❑ Open up Netbeans and create a new project
- ❑ Name that program accordingly as it cant be changed later

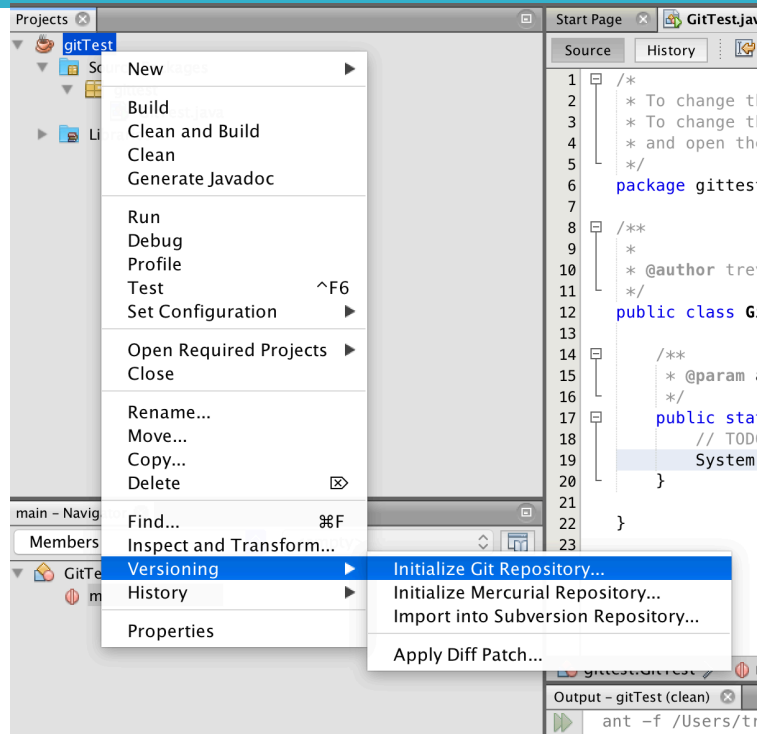

Turn your project into a repository

- Make some sort of program (no need to upload a blank file)
- Make sure you save before continuing

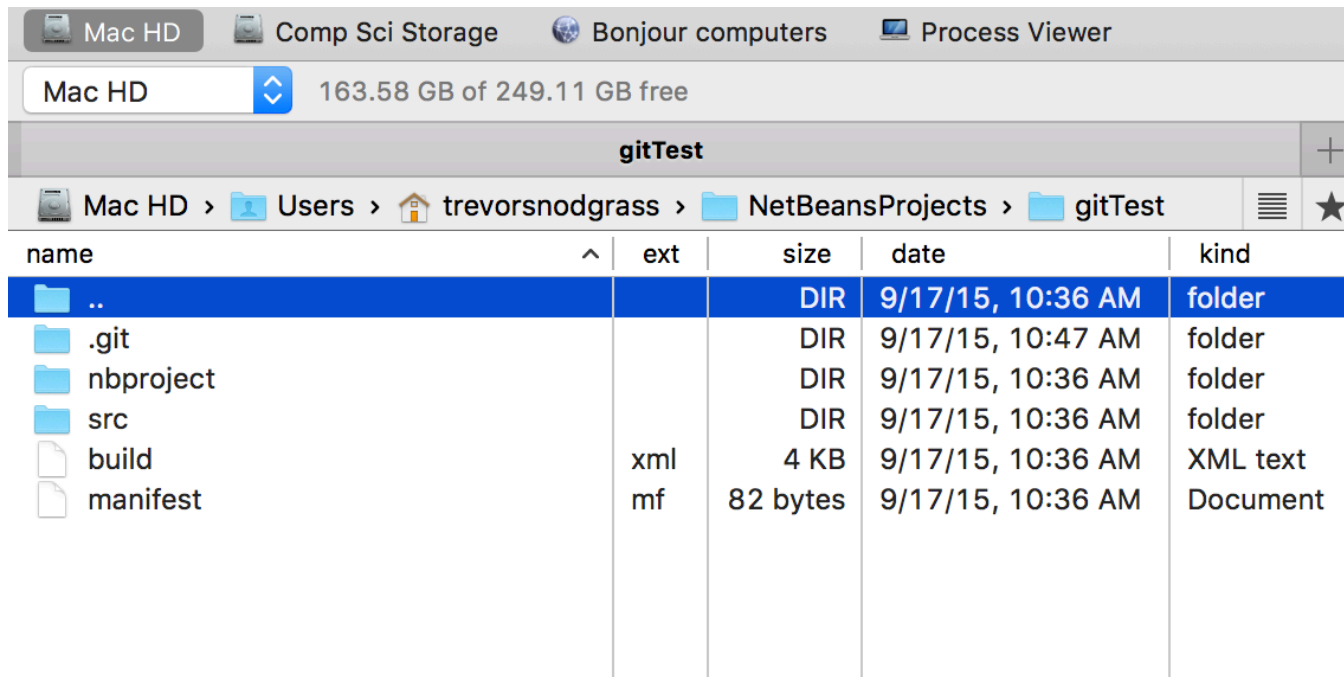

Turn your project into a repository

- Right click on your project in the sidebar and select “Versioning” and then “Initialize Git Repository”
- Just click OK on the next prompt

What does this do?

Creating a Git repository allows for your program to keep track of changes and adds a .git subfolder

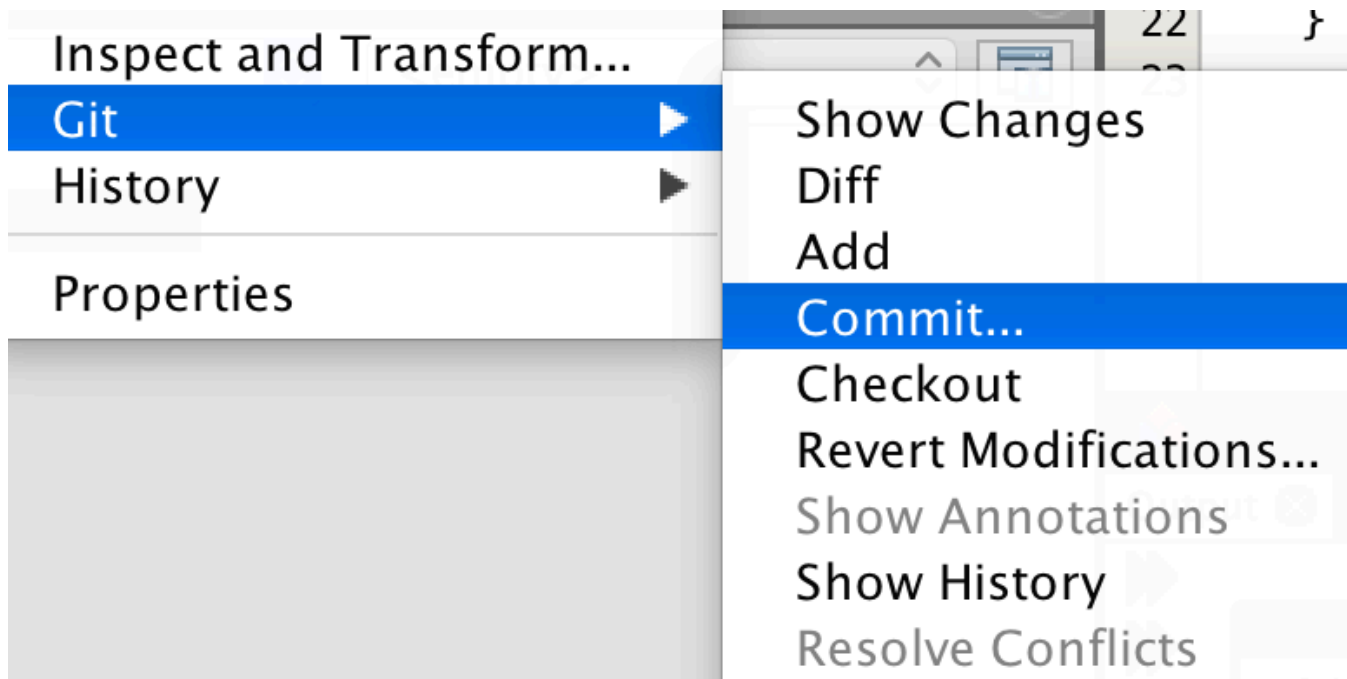

The screenshot shows a Mac OS Finder window titled 'gitTest'. The breadcrumb path is 'Mac HD > Users > trevorsnodgrass > NetBeansProjects > gitTest'. The window displays a list of files and folders. The first row, '..', is highlighted in blue. The other rows are: '.git' (folder, 9/17/15, 10:47 AM), 'nbproject' (folder, 9/17/15, 10:36 AM), 'src' (folder, 9/17/15, 10:36 AM), 'build' (XML text, 4 KB, 9/17/15, 10:36 AM), and 'manifest' (Document, 82 bytes, 9/17/15, 10:36 AM).

name	^	ext	size	date	kind
..			DIR	9/17/15, 10:36 AM	folder
.git			DIR	9/17/15, 10:47 AM	folder
nbproject			DIR	9/17/15, 10:36 AM	folder
src			DIR	9/17/15, 10:36 AM	folder
build		xml	4 KB	9/17/15, 10:36 AM	XML text
manifest		mf	82 bytes	9/17/15, 10:36 AM	Document

Committing to your repository

Right click on your project again and select “Git” and “Commit”

This adds your changes to the git log

github
SOCIAL CODING

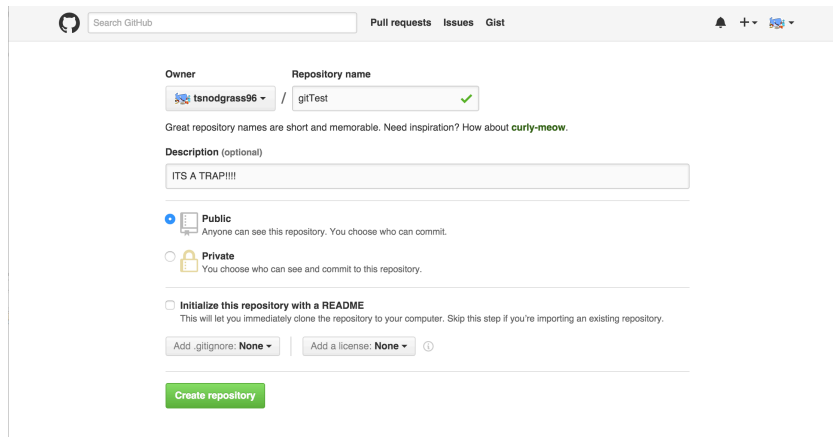

Uploading to Github

This is the fun part

Create your new “repo”

To create a github repository do the following:

- Click the plus sign and select create new repository
- Give the repository the same name as your program

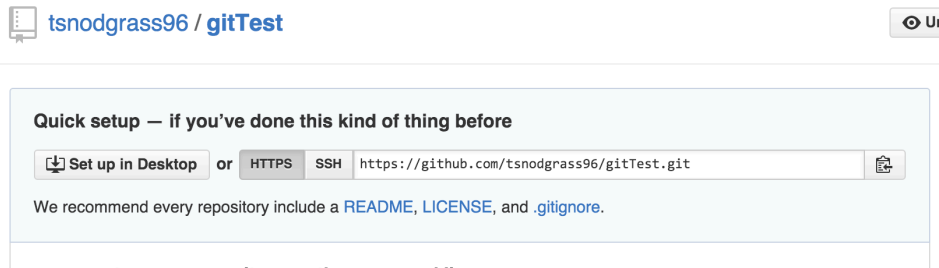

The screenshot shows the GitHub 'Create new repository' interface. At the top, there's a search bar and navigation links for 'Pull requests', 'Issues', and 'Gist'. The main form has two sections: 'Owner' and 'Repository name'. The 'Owner' is set to 'tsnodgrass96' and the 'Repository name' is 'gitTest', which is marked as valid with a green checkmark. Below this, a message states: 'Great repository names are short and memorable. Need inspiration? How about curly-meow.' The 'Description (optional)' field contains the text 'ITS A TRAP!!!!'. There are two radio button options for visibility: 'Public' (selected) and 'Private'. The 'Public' option is described as 'Anyone can see this repository. You choose who can commit.' The 'Private' option is described as 'You choose who can see and commit to this repository.' At the bottom, there's a checkbox for 'Initialize this repository with a README' and two dropdown menus for 'Add .gitignore: None' and 'Add a license: None'. A green 'Create repository' button is at the bottom right.

Create your new “repo”

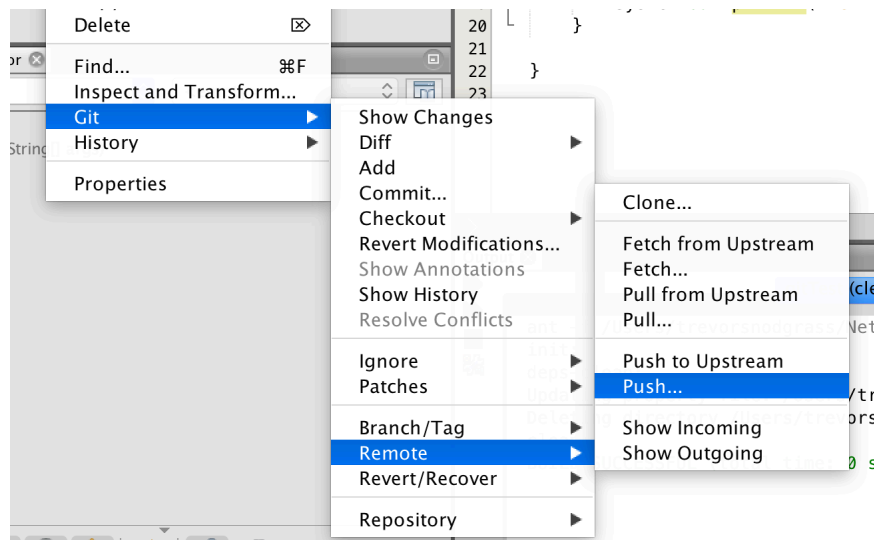

To create a github repository do the following:

- ▣ Copy the HTTPS key it gives you and then move back on over to netbeans (eventually you wont even need to copy it, you can just type it)

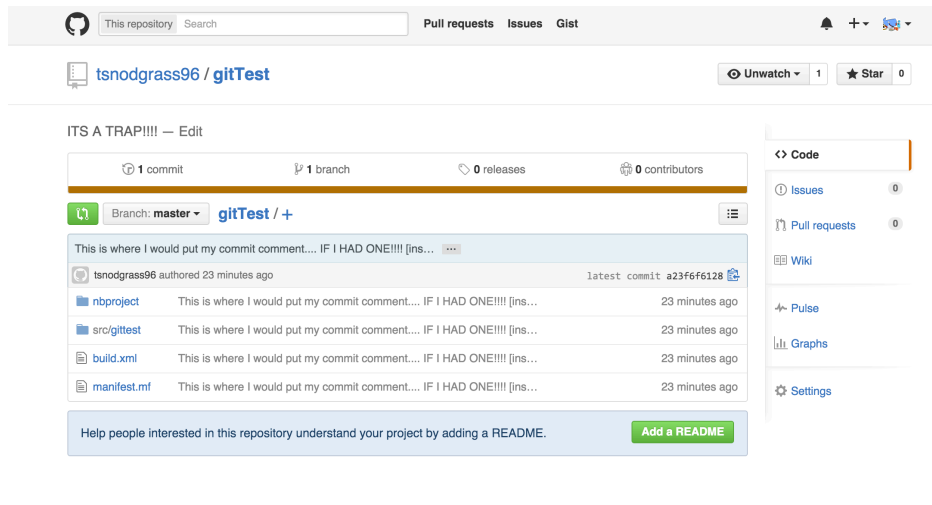

Connecting to Netbeans

- Right click on the project name and select “Git”, “Remote” and then “Push”
- Paste the URL you copied and then enter your Github info, and use the default branch (Master)

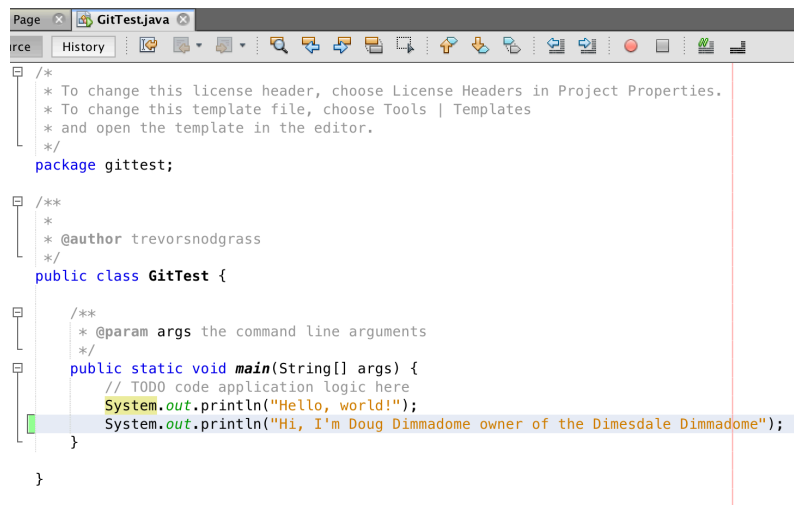

Move on back over to Github

- ❑ Refresh the page for your brand new shiny repo and magically there is new stuff and files!!!
- ❑ This is actually your full project and can be downloaded and opened in netbeans

Future Program Updates

```
/*
 * To change this license header, choose License Headers in Project Properties.
 * To change this template file, choose Tools | Templates
 * and open the template in the editor.
 */
package gittest;

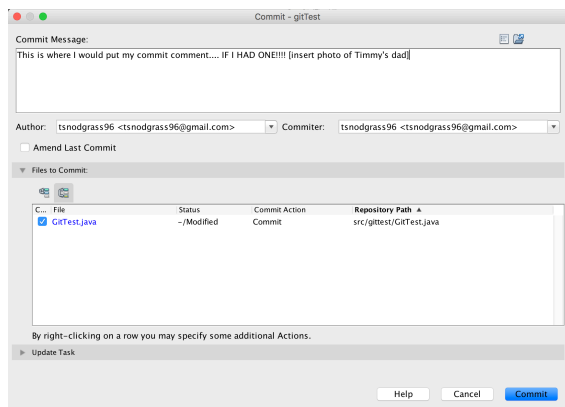

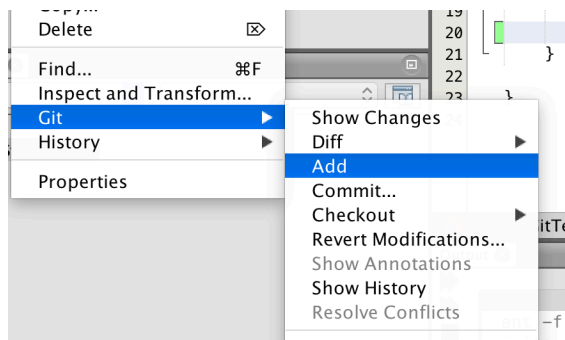

/**
 *
 * @author trevorsnodgrass
 */
public class GitTest {

    /**
     * @param args the command line arguments
     */
    public static void main(String[] args) {
        // TODO code application logic here
        System.out.println("Hello, world!");
        System.out.println("Hi, I'm Doug Dimmadome owner of the Dimesdale Dimmadome");
    }
}
```

No program doesn't go without being changed over time and updating Github is pretty easy

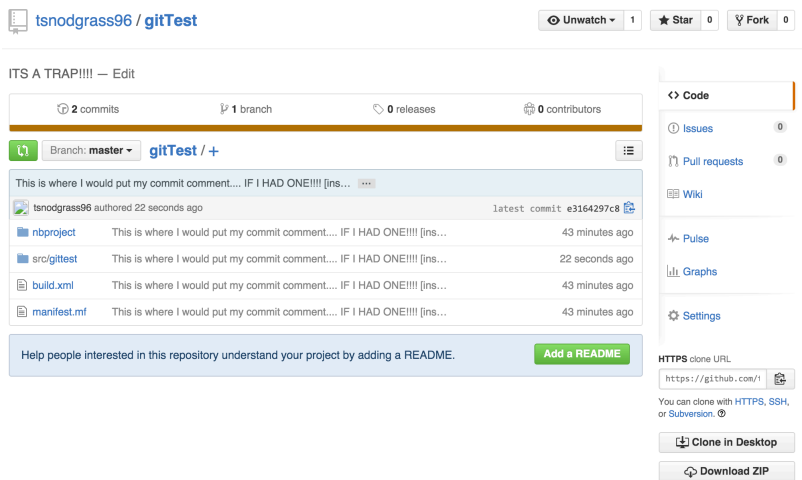

- Make some sort of changes to your program
- This will add a great tag surrounding the lines that you have added (red indicated removed)

Future Program Updates

- Right Click on your program name and select “Git” “Add” (this will make your file names turn blue meaning they need to be committed) then “Git” “Commit” and add a message
- Finally right click and select “Git” “Remote” “Push” and do the same process as before

Confirmation it is on Github

- Move back over to Github and refresh the page.
- You will see that the `/src` folder had been updated with a new time stamp and the file itself has actually been updated

This is where I would put my copyright.... IF I HAD ONE!!!!
